FOR

Department

Electrical

Major

Electrical Power & Machines

Program Description:

The program deals with the generation, transmission, distribution and control of electric energy systems and related equipment. This program prepares the students for positions as applied engineers or technologies with the technical and managerial skills necessary to enter careers in the design, application, installation, manufacturing, operation and maintenance of power systems. Students gain strengths in instrumentations, machines and power electronics, control, renewable energy. Graduates are well prepared for analysis, applied design, development and implementation of electrical systems.

Brief description

ELT 305 Advanced Electric Circuits:

This course is designed to give the student a basic knowledge of the electric circuit's analysis in general. The student has to know how to analyze any electric circuit using the different methods of analysis. Also this course is designed to give the student a basic knowledge of polyphase circuit's analysis.

ELT 326 Electric Circuits Analysis:

This course is designed to give the student a basic knowledge on electrical technology

ELT 375 Electrical Machines:

The purpose of this course is to give the student a basic knowledge of theory, construction, analysis, performance, and applications of transformers, synchronous, induction machines and . the most popular types of small machines.

ELT 376 Electrical Power System Analysis:

The purpose of this course is to give the student a basic knowledge of the power system representation, calculation of the different kinds of faults, load flow studies and economic operation of power system.

ELT 377 Industrial Electronics:

This course is designed to give the student a basic knowledge of the Operational amplifier applications, and Specialized linear ICs.

ELT 378 Electric Drives: This course gives the student a deep understanding of various aspects of different electric drives behavior for general industrial applications. A graduated student should have the ability to select, operate, and control electric machine drive.

ELT 475 Automatic Control:

The course includes four main topics in the field of automatic control: Control System Terminology, Linear Systems and Differential Equations, Frequency Response, and Stability.

ELT 476 Digital Electronics:

This course gives the student a basic knowledge about the number systems, logic gates and their applications, digital circuit design, arithmetic logic unit, and microcontrollers.

ELT 455 Renewable Energy:

This course is concerned with the sustainable energy and include the following topics:

- Sustainable Development (Urgent Need).
- Primary Resources for Sustainable Generation.

Sustainable Generation Technologies.

ELT 456 Power System Control & Stability:

This course is concerned with the power system generation, control and stability. This gives the student a basic knowledge about the components of power system, control of generation, excitation systems, some abnormal condition in power system and steady-state stability.

ELT 477 Power System Protection:

The course presents four major topics in the area of power system protection. This includes: Attributes of Protection Systems, Protective Relays, Circuit Breakers, and Protection Schemes.

Courses description

Department	General Study	Major	All Majors
Course Name	Arabic 2	Course Code	ARB 305
Prerequisites		Credit Hours (L,W,T)	2 (2,0,0)

Course description :

This course concentrates on improving the advance skills of arabic composition of technical colleges students according to their needs and knowledge. It enables them to acquire enough knowledge of types of writing in Arabic. It also gives the theoretical description and practical training of the basic types : summarizing, report, and administrative message,..etc. The course also intends to introduce dictative and grammatic subjects to solve the problems of writing and the common mistakes in composition with training on them to change them to acquired linguistic experiences.

Topics :

- Building elements of the text.
- Types of functional writing.
- Types of technical writing.
- Writing mistakes.

Textbook :

كتاب: " التحرير الكتابي " للمؤلفين : د. حمدان الزهراني، د. فهد اللهيبي، د. سعد المطرفي . دار النشر: دار حافظ بجدة

Department	General Study	Major	All Majors
Course Name	Islamic Culture 3	Course Code	ISL 305
Prerequisites		Credit Hours (L,W,T)	2 (2,0,0)

Course description :

This course covers principle areas of Islam and Contemporary Issues such as islam systems (the aims of Islam, profession in Islam , and human right) considering to the determination of the general objectives of profession conception , the purposes, and the principles that islam brought, concentrating on what distinguishes islam in its organization with respect to its completeness, its detailing, and its linking between the purposes of sharia and what it brought as a social and economic system

Topics :

- Introduction to assets approach Sunnis.
- profession in Islam.
- Human Right in Islam.
- Suspicious cases in Human Right and response.

Textbook :

المدخل الى الثقافة الإسلامية – جامعة الملك سعود

Department	General Study	Major	All Majors
Course Name	Advance Computer Applications	Course Code	CMT 385
Prerequisites		Credit Hours (L,W,T)	2 (0,4,0)

Course description :

This course designed to give the student an advance skill of the Microsoft Word, Microsoft Excel and Microsoft Project. The student has to know how to use the advance option and create a professional document.

Topics :

- Microsoft Word : Use advance option and inset it inside the document
- Microsoft Excel : Use the high level option with workbooks
- Microsoft Project : Give a brief knowledge about how the student use the Microsoft Project

Experiments: if applicable it will support the theoretical topics.

Week No	Contents	material	Hours
1	Create new documents apply templates	Microsoft Word	4
2	Inserting special characters (©, ™, £) Configure AutoCorrect Options Inserting Special Characters Using AutoCorrect Disabling AutoCorrect		4
3	Record simple macros Assign shortcut keys Manage macro security		4
4	Create new workbooks using templates Select a Template from the New Tab Search for Additional Templates	Microsoft Excel	4
5	Display dates and times with functions Summarize data with functions Use a financial function Use formulas to create subtotals Uncover formula errors		4
6	Demonstrate how to apply the SUM function Demonstrate how to apply the COUNT function Demonstrate how to apply the AVERAGE function Demonstrate how to apply the MIN and MAX functions		4
7	Import files Set data validation Create outlines Collapse groups of data in outlines Filter records Change the sort order Remove duplicates Manage macro security		4
8	Navigate in Microsoft Project Create a Project Schedule Define Project Calendars Enter Tasks and Task Details Organize Tasks into Phases Link Tasks Document Tasks	Microsoft Project	4

	Review the Project Schedule's Duration		
9	Establish people resources Establish equipment resources Establish material resources Establish cost resources Establish resource pay rates Adjust resource working times Add resource notes	Microsoft Project	4
10	Assign work resources to tasks Add more work resource assignments to tasks Assign material resources to tasks Assign cost resources to tasks		4
11	Apply a task calendar to an individual task Change task types Split a task Establish recurring tasks Apply task constraints Review the project's critical path View resource allocations over time		4

Department	General Study	Major	All Majors
Course Name	Computer Programming	Course Code	CMT 325
Prerequisites		Credit Hours (L,W,T)	3 (2,2,0)

Course description :

The main purpose of this course is to help the trainees increase their programming and problem solving skills.

This course should provide trainees with basic Knowledge of C++-Programming, regarding syntax and applied practice, with a focus on object-oriented design principles.

Topics :

- Problem-Solving and Introduction programs and C++.
- Elementary programming.
- Selections.
- Mathematical Functions, Characters, and Strings.
- Loops.
- Functions.
- Arrays.
- Objects and classes.

Experiments: if applicable it will support the theoretical topics.

References :

- Y. Daniel Liang, Introduction to Programming with C++, 3/E.
- Gary J. Bronson, C++ for Engineers and Scientists, 3/E.

Detailed of Theoretical Contents			
	Contents	Week no.	Hours
1	Problem-Solving and Introduction programs and C++: <ul style="list-style-type: none"> - Algorithms and Flowchart. - Understand software development cycle. - Realize the fundamental of C ++. 	1	2
2	Elementary programming : <ul style="list-style-type: none"> - Study basic data types, their declarations and initializations. - Characters, and Strings. - Use variables to store data. 	2	4
3	Selections : <ul style="list-style-type: none"> - Implement selection control using if and switch statements - Combine conditions using logical operators - Write expressions using the conditional operator. - Format output using stream manipulators. - Examine the rules governing operator precedence and operator associativity . 	1	2
4	Loops: <ul style="list-style-type: none"> - Write loops using do-while, while and for statements. - Control a loop with the user confirmation or a sentinel value. - Write nested loops. - Learn the techniques for minimizing numerical errors. - Implement program control with break and continue . 	1	2
5	Function basics: <ul style="list-style-type: none"> - Mathematical Functions. - Define and invoke different types of functions. - Use function prototypes for function headers. - Know how to pass arguments. - Create header files for reusing functions. - Develop functions for various tasks - Develop applications using C++ functions . 	2	4
6	Advanced function feature: <ul style="list-style-type: none"> - Experience advanced topics on pass-by-value, pass-by-reference. - Understand the difference between them. - Determine the scope of local and global variables. - Define functions with default arguments. - Improve runtime efficiency by using inline functions . 	1	2
7	Arrays : <ul style="list-style-type: none"> - Understand the necessity of an array in programming. - Know how to declare and initialize an array. 	2	4

	<ul style="list-style-type: none"> - Program common array operations. - Develop and invoke functions with array arguments. - Process string using C-strings . 		
8	<p>Objects and classes:</p> <ul style="list-style-type: none"> - Describe objects and classes. - Create objects using constructors. - Distinguish between instance and static variables and functions. - Access data fields and invoke functions using the object member access operator. - Declare private data fields for data field encapsulation and make classes easy to maintain . 	2	4
9	<p>Files and streams:</p> <ul style="list-style-type: none"> - Learn ifstream, ofstream, and fstream classes for processing and manipulating files. - Read and write data using the getline, get and put functions. - Study functions to test file existence and the end of a file. - Open a file for both input and output to update files . 	1	2
Textbook:		<p>Y. Daniel Liang, Introduction to Programming with C++, 3/E.</p> <p>Gary J. Bronson, C++ for Engineers and Scientists, 3/E.</p>	

Detailed of practical Contents

	Contents	Week no.	Hours
1	Algorithms and draw flowchart exercises.	1	2
2	Develop a simple C++ program for console output using Visual C++. Read input from keyboard. Program with assignment statements and expressions familiar with C++ documentation, programming style. Experience various errors and debug logic errors .	2	4
3	Training on Selections statements.	1	2
4	Training on looping statements.	1	2
5	Training on functions.	3	6
6	Training on Arrays .	2	4
8	Training on Objects and classes.	2	4
9	Training on Files and streams.	1	2

Course Name	English 1	Course Code	ENG 305
Prerequisites		Credit Hours (L,W,T)	2 (2,0,2)

Course description :

English 1 is reading course. It is about improving and empowering Student's reading. Through exposure to different types of reading and approach to reading, the learners learn the strategies and practice for strengthening comprehension skills, building vocabulary, and test preparation.

Topics :

- Reading for Pleasure:

lets students select their own reading materials to practice new strategies and broaden their vocabulary.

- Reading Comprehension Skills:

covers skimming, scanning, recognizing topics and main ideas, understanding sentences, and making inferences.

- Thinking Skills:

involves targeted practice in inference and analytic skills.

- Reading Faster:

helps students develop speed and flexibility in reading with high interest, short fiction and non-fiction selections.

- Reading Faster texts (which includes different types of reading) Fiction, Biography, Non-fiction

Experiments :if applicable it will support the theoretical topics.

Course description :

English 3 is writing course. It is an intermediate course for English language. It helps students to master the standard organisational patterns of the paragraph and the basic concepts of essay writing. It integrates the study of rhetorical patterns and the writing process with extensive practice in sentence structure and mechanics.

Topics :

- Paragraph Format
- Narrative Paragraphs
- Paragraph Structure
- Descriptive Paragraphs
- logical Division of ideas
- Process Paragraphs
- Comparison/Contrast Paragraphs
- Definition Paragraphs
- Essay Organization
- Opinion Essays

Experiments: if applicable it will support the theoretical topics.

Course description :

English 5 is a communication skill course. It is a course designed to develop students' oral, written, and interpersonal communication skills essential for life and work. Students will learn communication principles, strategies, and methods through discussions, exercises, and examples. They will be trained in how to communicate clearly and effectively in various social, business, and intercultural situations. In addition, they will learn and practice verbal, nonverbal, and electronic communication.

Topics :

- Whatis Communication?
- Effective ListeningSkills
- Verbal Communication
- Communicating Over the Phone
- Nonverbal Communication
- Written Communication
- CommunicatingElectronically

Experiments: if applicable it will support the theoretical topics.

Department	General Study	Major	All Majors
Course Name	Physics (2)	Course Code	PHY325
Prerequisites	General physics	Credit Hours (L,W,T)	4(3,2,0)

Course description :

The course enables students to gain theoretical and practical background in physics. The course includes the development of skills and understanding of basic principles of Physical measurements. The student has to know the basic notions of the electric circuits and basic electronic devices like resistors and transistors, the measurement of characteristics of electric signals and the use of basic instrumentation and to know how to analyze any electric circuit using the different methods of analysis.. Also this course is designed to give the student a basic knowledge in the theory of electricity, electrostatics and magnetism.

Topics :

- Physical Measurements
- Direct-Current Circuits and Resistance
- Alternating Current Circuit (AC Circuit)
- Electrostatics
- The magnetic field
- Faraday's law of electromagnetic induction

Experiments: if applicable it will support the theoretical topics.

Department	General Study	Major	All Majors
Course Name	Mathematics (3) Linear Algebra	Course Code	MAT 325
Prerequisites	General Math	Credit Hours (L,W,T)	4 (3,2,1)

Course description :

This course is designed to give the student a basic knowledge of the Complex numbers and its operations. The student has to know the basic notions of vector spaces and how to solve any linear systems of equations using Gauss-Jordan Elimination. Also this course is designed to give the student an introduction to the first and second order linear differential equations and to solve initial value problem by Laplace Transforms.

Topics :

- ComplexNumber
- Vectorsspaces
- Linearsystems of equations
- Introduction to differentialequation
- Laplace Transform

Experiments: if applicable it will support the theoretical topics.

- Albert L.Rabenstion, elementarydifferentialequationwithLinearAlgebra

Detailed of Theoretical Contents			
	Contents	Week no.	Hours
1	Complex Number: Operation on complex number- Demoiver theorem- Solution of a quadratic equation	1-2-3	18
2	Vector spaces: Basic notions of vectors spaces- subspaces- Linear combination, linear independent, basis and dimension of vector spaces	4-5-6	18
3	Linear systems of equations: Gauss-Jordan elimination- Elementary row operations- reduced row echelon form- Solution of linear system by gauss- Jordan elimination	7-8	12
4	Introduction to differential equations: Some first order of differential equation-Second order linear differential equation	9-10-11	18
5	Laplace transforms: Solving initial value problem by Laplace transform	12-13	12
Textbook:		C.Edward and D. penny, Elementary Linear Algebra	

Department	General Study	Major	All Majors
Course Name	Mathematics (4) Discrete and Numerical Analysis	Course Code	MAT 326
Prerequisites	General Math	Credit Hours (L,W,T)	4 (3,2,1)

Course description :

This course is designed to give the student a basic knowledge of the Sequences and the Numerical series. The student has to know the basic notions of the numerical method and how to solve any linear or non linear equations using Newton-Raphson method . Also this course is designed to learning the student how to apply the Linear and Quadratic Lagrange interpolation and the Rectangular and Trapezoidal method for numerical integration. Further, this course gives to the students an introduction to Fourier series and Fourier transform.

Topics :

- Sequences
- NumericalSeries
- NumericalMethod
- Computer compilation
- Fourier Analysis

Experiments: if applicable it will support the theoretical topics.

References :

- C. Woodford,Chris Phillips, Numerical Methods with Worked Examples.
- T. W. Körner, Fourier analysis
 - PremKythe,Dongming Wei, An Introduction to Linear and Nonlinear Finite Element Analysis

Detailed of Theoretical Contents			
	Contents	Week no.	Hours
1	Sequences: Some important limits-Convergence and divergence - Monotonocity and boundedness of sequences.	1-2-3	18
2	Numerical Series: Convergence and divergence series- some usual series (Harmonic, Geometric and P-series)- Positive series (integral, ratio tests)- Positive series: Integral, ratio, root and comparison tests. Power series: Interval of convergence-representation of function. Maclaurin and Taylor series.	4-5-6	18
3	Numerical Method: Newton-Raphson method for solving linear or nonlinear equations. Interpolation: Linear and quadratic Lagrange interpolation. Numerical integration: Rectangular and Trapezoidal method. Some Application on MATLAB	7-8-9-10	18
4	Fourier Analysis: Fourier seris- Fourier transform	11-12-13	9
Textbook:		Keith E. Hirst,Keith Edwin Hirst, Numbers, Sequences and Series	

Department	General Study	Major	All Majors
Course Name	Engineering statistics and probability	Course Code	STA 425
Prerequisites	General Math	Credit Hours (L, W, T)	4 (3,2,1)

Course description :

This course is designed for students majoring in engineering of technology. Topics include: probability, random variables, discrete and continuous probability distributions, statistical process control, and parameters estimation.

Topics :

- Introduction to Probability Vector spaces
- Random variable and Probability Distributions
- Some Discrete Probability Distribution
- Some Continuous Probability Distribution
- Introduction to statistics
- Parameter Estimation

Experiments: if applicable it will support the theoretical topics.

References :

- Ross, S. *A First Course in Probability*, Fifth Edition
- Devore, Jay L., *Probability and Statistics for Engineering and the Sciences*, Eighth Edition

Detailed of Theoretical Contents			
	Contents	Week no.	Hours
1	Introduction to Probability: Random Experiment - Sample space – Event – Counting Sample space – Probability of an Event - The Axioms of Probability – Conditional Probability – Independent Events	1-2-3	18
2	Random variable and Probability Distributions: Concept of a Random Variable - Discrete Probability Distribution-Continuous Probability Distribution - Mean and Variance of a Random Variable	4-5-6	18
3	Some Discrete Probability Distribution: Bernoulli Trials – Binomial Distribution – Poisson Distribution	7-8	12
4	Some Continuous Probability Distribution: Continuous Uniform Distribution – Normal Distribution – Exponential Distribution	9-10-11	18
5	Introduction to statistics and Parameter Estimation: Sampling Theory – Sample Distribution Function – Samples and Statistics – Methods of Estimation (Point , Interval) – Confidence Interval	12-13	12
Textbook:			

Department	General Study	Major	All Majors
Course Name	Introduction to management & leadership	Course Code	GMS 335
Prerequisites		Credit Hours (L, W, T)	2 (2,0,2)

Course description :

This course prepares students with a comprehensive introduction to effective management principles and conduct. It aims at providing students with an introduction to contemporary management concepts and skills, and encourages students to put these concepts and skills into practice. This course is an introduction to the management function. It will focus on the theory and fundamental concepts of management including planning, organization, leadership, and control. This class will review the evolution of management thought, function and practice and will stress current approaches and emerging concepts.

Topics :

- introduction to management
- integrativemanagerial issues
- Planning
- Organizing
- Leading
- controlling

Experiments : if applicable it will support the theoretical topics.

References :

- Robbins, Stephen P, and Coulter, Mary. (2012) Management, 11th Edition, Prentice Hall

Detailed of Theoretical Contents			
	Contents	Week no.	Hours
1	Effective Management for Managers Today - Introduction to Management and Organizations. Management Yesterday and Today. Organizational Culture and Environment: The Constraints. Social Responsibility and Managerial Ethics.	4	8
2	Management Functions and Techniques - Decision-Making: The Essence of the Manager's Job. Foundations of Planning, planning tools and techniques. Organizational Structure and Design. Human.	3	6
3	Resource Management. Managing Change and Innovation. Understanding Groups and Teams. Leadership skills. Foundations of Control. Operations and Supply Chain Management.	2	4
4	Contemporary Management Competencies - Time Management Skills. Effective Communication Skills. Problem Solving Skills. Crisis Management	4	8
Textbook:		Robbins, Stephen P, and Coulter, Mary. (2012) Management, 11th Edition, Prentice Hall	

Department	General Study	Major	All Majors
Course Name	Communication Skills	Course Code	GMS 336
Prerequisites		Credit Hours (L, W, T)	2 (2,0,2)

Course description :

This course is intended to provide the students with plain understanding of the key subjects, matters and ideas educative in the field of communication studies.

Topics :

- Communication Today.
- Reports and proposals.
- Nonverbal communication.
- Interpersonal skills
- Interpersonal skills
- Negotiation skills
- Conflict management
- Intercultural communication
- Organizational communication
- Public communication
- Team communication

Experiments: if applicable it will support the theoretical topics.

Department	General Study	Major	All Majors
Course Name	Engineering Project Management	Course Code	GMS 437
Prerequisites		Credit Hours (L,W,T)	(3,0,2)3

Course description :

The Engineering Project Management Course is intended to help meet the requirements of industry by educating undergraduate engineering students to understand engineering projects, project organizations and project management methods. Students completing this course will be able to work effectively in multidisciplinary engineering projects immediately after completion and to advance more rapidly within the project management organization and profession. The management of projects entails technical knowledge, engineering skills and management skills.

Topics :

- Introduction to project management
- Organizational influences and project life cycle.
- Project management processes
- Project integration management
- Project scope management.
- Project time management
- Project cost management.
- Project quality management
- Project humanresource management.
- Project communications management.
- Project risk management
- Project procurement management.
- Project stakeholder management

Experiments: if applicable it will support the theoretical topics.

Department	General Study	Major	All Majors
Course Name	Quality Tools and Applications	Course Code	GMS 438
Prerequisites		Credit Hours (L,W,T)	3 (3,0,2)

Course description :

This course gives the student basic foundation knowledge on Quality Management and its Tools and Applications, this course has been design to help the student to understand the quality concept as a major successful factor for the competitiveness at any sector.

By the end of this course, the student should know when, why and how to apply the quality concepts and tools successfully on his workplace.

Topics :

- Quality Management as a Concept
- Quality Management as a Culture
- Quality Management as a Strategic Planning
- Overview on Quality Management Tools
- ProblemsSolving and DecisionsMaking
- Optimizing and ControllingProcesses
- Implementing the Quality Management

Experiments:if applicable it will support the theoretical topics.

References :

Textbook:	Quality Management Introduction to Total Quality Management for Production, Processing and Services. (Sixth Edition) By David L. Goetsch and Stanley B. Davis		

Department	General Study	Major	All Majors
Course Name	Engineering Economy	Course Code	GMS 439
Prerequisites		Credit Hours (L, W, T)	(2,0,2)2

Course description :

This course covers the basics of economic analysis from an engineering perspective. The concepts and techniques required to facilitate the evaluation and comparison of investment opportunities on an economic basis are presented, along with the corresponding Excel spreadsheet functions. Topics include: foundations of engineering economy, nominal and effective interest rates, engineering economy factors, present worth analysis, annual worth analysis, rate of return analysis, benefit/cost analysis and public sector economics, breakeven and payback analysis, and depreciation methods.

Topics:

- Foundations of Engineering Economy
- Engineering Economy Factor
- Nominal and Effective Interest Rates
- Present Worth (PW) Analysis
- Annual Worth (AW) Analysis
- Rate of Return (ROR) Analysis
- Benefit /Cost (B/C) Analysis and Public Sector Economics
- Breakeven and PaybackAnalysis

Experiments: if applicable it will support the theoretical topics.

Department	Electrical Technology	Major	Electrical Power Systems & Machines
Course Name	Advanced Electrical Circuits	Course Code	ELT 305
Prerequisites		Credit Hours (L,W,T)	

Course description :

This course is designed to give the student a basic knowledge of the electric circuit's analysis in general. The student has to know how to analyze any electric circuit using the different methods of analysis. Also this course is designed to give the student a basic knowledge of polyphase circuit's analysis.

Topics :

- Review of DC and AC Circuits.
- Transient Circuit Analysis.
- The Sinusoidal Steady-State Analysis.
- Polyphase Circuits.

Experiments : if applicable it will support the course topics.

References :

Bolested Electrical circuit analysis, Theraja "Electrical Technology"

Department	Electrical Technology	Major	Electrical Power Systems & Machines
Course Name	Industrial Electronics	Course Code	ELT 377
Prerequisites	ELT 326	Credit Hours (L,W,T)	

Course description :

This course is designed to give the student a basic knowledge of the Operational amplifier applications, and Specialized linear ICs.

Topics :

- Operational Amplifier Applications with Real Impedances.
- Op.-Amp. Applications with Complex Impedances.
- Specialized Linear Ices.

Experiments : if applicable it will support the course topics.

References :

Deuton J.D.” Operational Amplifiers and Linear Integrated Circuits”, McGraw-Hill

Department	Electrical Technology	Major	Electrical Power Systems & Machines
Course Name	Electrical Machines	Course Code	ELT 375
Prerequisites	ELT 326	Credit Hours (L,W,T)	

Course description :

The purpose of this course is to give the student a basic knowledge of theory, construction, analysis, performance, and applications of transformers, synchronous, induction machines and . the most popular types of small machines.

Topics :

- Transformers.
- Synchronous Machines.
- Induction Machines.
- Single Phase Induction Motors.
- Reluctance and Repulsion Motors.
- Permanent Magnet Machines.
- Stepper Motors.
- Servomotors

Experiments : if applicable it will support the course topics.

Department	Electrical Technology	Major	Electrical Power Systems & Machines
Course Name	Power System Control & Stability	Course Code	ELT 456
Prerequisites	ELT 376 ELT 475	Credit Hours (L, W, T)	

Course description :

This course is concerned with the power system generation, control and stability. This gives the student a basic knowledge about the components of power system, control of generation, excitation systems, some abnormal condition in power system and steady-state stability.

Topics :

This includes the following:

- Components of Power System.
- Control of Generation.
- Excitation Systems.\
- Some Abnormal Condition in Power System.
- Steady State Stability.

Experiments_: if applicable it will support the course topics.

References :

- Stevenson, W.: Elements of Power System Analysis.

Department	Electrical Technology	Major	Electrical Power Systems & Machines
Course Name	Power System Protection	Course Code	ELT 477
Prerequisites	ELT 376	Credit Hours (L,W,T)	

Course description :

The course presents four major topics in the area of power system protection. This includes: Attributes of Protection Systems, Protective Relays, Circuit Breakers, and Protection Schemes.

Topics :

- Attributes of Protection Systems.
- Protective Relays.
- Circuit Breakers.
- Protection Schemes.

Experiments : if applicable it will support the course topics.

References :

- Freeman, J.: Electric Power Systems Engineering.
- Stevenson, W.: Elements of Power System Analysis.

Department	Electrical Technology	Major	Electrical Power Systems & Machines
Course Name	Renewable Energy	Course Code	ELT 455
Prerequisites		Credit Hours (L, W, T)	

Course description :

This course is concerned with the sustainable energy and include the following topics:

- Sustainable Development (Urgent Need).
- Primary Resources for Sustainable Generation.

Sustainable Generation Technologies.

Topics :

- Sustainable Development (Urgent Need).
- Primary Resources for Sustainable Generation.
- Sustainable Generation Technologies.

Experiments_: if applicable it will support the course topics.

Department	Electrical Technology	Major	Electrical Power Systems & Machines
Course Name	Automatic Control	Course Code	ELT 475
Prerequisites	ELT 306	Credit Hours (L,W,T)	

Course description :

The course includes four main topics in the field of automatic control: Control System Terminology, Linear Systems and Differential Equations, Frequency Response, and Stability

Topics :

- Control System Terminology.
- Linear Systems and Differential Equations.
- Frequency Response.
- Stability.

Experiments : if applicable it will support the course topics.

Department	Electrical Technology	Major	Electrical Power Systems & Machines
Course Name	Digital Electronics	Course Code	ELT 476
Prerequisites	ELT 326	Credit Hours (L,W,T)	

Course description :

This course gives the student a basic knowledge about the number systems, logic gates and their applications, digital circuit design, arithmetic logic unit, and microcontrollers.

Topics :

- Number Systems:
- Logic Gates and Their Applications.
- Digital Circuit Design and Simplification.
- Arithmetic Logic Unit.
- Flip-Flops and Their Applications.
- Registers and Counters.
- Memories.
- The Analogy Interface.
- Microcontrollers

Experiments : if applicable it will support the course topics.

Department	Electrical Technology	Major	Electrical Power Systems & Machines
Course Name	Electric Drives	Course Code	ELT 378
Prerequisites	ELT 375	Credit Hours (L,W,T)	

Course description :

This course gives the student a deep understanding of various aspects of different electric drives behavior for general industrial applications. A graduated student should have the ability to select, operate, and control electric machine drive.

Topics :

The course covers the following topics:

- Basic Concepts.
- DC Motor Drives.
- AC Motor Drives.
- Traction Drives.

Experiments : if applicable it will support the course topics.

Department	Electrical Technology	Major	Electrical Power Systems & Machines
Course Name	Electrical Power System Analysis	Course Code	ELT 376
Prerequisites		Credit Hours (L,W,T)	

Course description :

The purpose of this course is to give the student a basic knowledge of the power system representation, calculation of the different kinds of faults, load flow studies and economic operation of power system.

Topics :

The course contains four main topics:

- Power Systems Representation.
- Fault Calculations.
- Load Flow Studies.
- Economic Operation of Power System.

Experiments : if applicable it will support the course topics.

Prerequisites		Credit Hours (L,W,T)	

Course description :

This course gives the student a basic knowledge about the Electronic devices and their applications

Topics :

- Introduction to semiconductors and Fundamentals on Pspice
- Diodes Applications and special purpose Diodes: Zener Diode, LED etc
- Bipolar Junction Transistors:.
- Transistor Bias Circuit
- Bipolar Junction Transistor Amplifiers and power amplifiers
- Field Effect transistors:
- Thyristors and GTO
- Voltage Regulators :
- Active filters

Experiments_: if applicable it will support the course topics.

Department	Electrical Technology	Major	Electrical Power Systems & Machines
Course Name	Electric Circuits Analysis	Course Code	ELT 306
Prerequisites	ELT 305	Credit Hours (L,W,T)	

Course description :

This course is designed to give the student a basic knowledge on electrical technology

Topics :

- Harmonics
- filters analysis.
- symmetrical components
- Electromagnetism

Experiments_: if applicable it will support the course topics.
